

“I know the sky is not the limit because there are footprints on the Moon – and I made some of them!”
- Buzz Aldrin

A workshop was conducted in school by the organization, ‘Space’ with a focus on teaching Space Science and Astronomy to students through hands-on experience. The workshop was organized in groups to cater to age-specific learning and queries.

The workshop started with a quiz and some other interesting facts about astronomy. The winners of the quiz got a chance to launch Stomp Rockets.

The children participated with full zeal and enthusiasm and enjoyed the activity.

Thereafter, students witnessed another activity in which comets were created using dry ice and wet soil. Few lucky ones got the chance to create one of their own.

The icing on the cake was the launching of the Hydro rocket. Children watched enthusiastically as a rocket was launched high into the sky using pressure and water.

The workshop ended with smiles, learning, and an appetite to know more.
