

## Report on Hands on Activity

The evidence was provided by class 3 students through their hands-on experiments and the volley of questions by class 4 students which was handled beautifully by the students of class 3.

Students of class 3 were all geared up to challenge the scientific knowledge of class 4 students with the demonstration of the following experiments:

- Oil Vs Honey Experiment
- Bending Pencil Experiment

Both the experiments were based on the concept of density. Students of Class 4 were able to make connections and relate this concept to everyday life.

**Waiting for the next round when once again something incredible is waiting to be known.**
